Islamabad, Pakistan | 03390027801 | techasad786@gmail.com

I am a PHP Laravel developer who likes to build websites and apps that work fast and look good. I create strong backends with Laravel, connect them to frontends made with React, and make sure everything runs smoothly.

Skills

Languages & Frameworks: PHP, Laravel, JavaScript, React JS

Web & UI Technologies: HTML5, CSS3, Tailwind CSS

Databases: MySQL, MongoDB

Tools & Platforms: Git, CPanel, Web Hosting/Deployment

Other: REST APIs, JWT Auth, Blade Templates, Postman, Eloquent ORM, MVC Architecture

Professional Experience

PHP Laravel Developer, SysTellex Inc.

Sept 2024 – Present

- Maintained and enhanced a custom CRM system, ensuring high performance and stability.
- Successfully migrated the CRM from Core PHP to Laravel, improving scalability and maintainability.
- Designed efficient and normalized databases using ERD modeling.
- Developed and integrated RESTful APIs for seamless communication with React front-end.
- Utilized Laravel Eloquent ORM and Query Builder for database operations.
- Implemented secure JWT authentication and built custom middlewares for access control.

Backend Developer, CafeVista (Pvt) Ltd

March 2024 – July 2024

- Developed and integrated Laravel APIs with React JS front-end components.
- Implemented user authentication and role-based access using Laravel.
- Designed and managed MySQL and MongoDB databases for scalable storage solutions.
- Built dynamic views using Blade templates and enhanced UI/UX with Bootstrap and Tailwind CSS.
- Improved page load speeds and SEO through performance tuning and optimized design.
- Gained a strong understanding of Laravel routing, middleware, controllers, and best practices.

Projects

Job Portal

[Github](#)

CareerVibe is a job portal website that features Laravel, Bootstrap, jQuery, and Ajax. This website allows users to create accounts and post jobs. They can also apply for the jobs posted by other users.

Web Security Testing

[Github](#)

Web Security Testing is a Python-based web app created using Flask, Bootstrap, BS4, and other Python libraries. This website allows users to scan their website and find vulnerabilities, and then it suggests the steps to overcome those issues.

Education

IQRA University Islamabad Campus – BS Computer Science

2024
